

Theme	Project	2005	2006	2007	2008	2009	2010 onwards	
Holistic approach to managing flood and coastal erosion risk	EA strategic overview	Extension of EA strategic role to other forms of flooding and coastal erosion – legislative and organisational considerations. Considering impact of ICZM, WFD and CFMPs/SMPs						
	Urban flood risk and integrated drainage	Desk study, develop and monitor pilots, including consideration of SUDS						
	Urban flood risk and the transport network	Amend publications to ensure flood risk is appropriately considered						
	Risk mapping and groundwater flooding	Risk mapping: enhancements; extend scope to other sources of flood risk and coastal erosion						
		Groundwater flooding records collation, monitoring and risk assessment						
	Land management	Catchment scale land-use management and its possible implications for flood risk management e.g. follow on work from R&D (FD2114)						
Identifying on-the-ground changes or good practice in land management with respect to flood risk considerations and environmental benefits. Also investigate mechanisms to ensure they are delivered e.g. agri-environment schemes, catchment sensitive farming etc								

Theme	Project	2005	2006	2007	2008	2009	2010 onwards
Achieving sustainable development	Identifying the barriers and incentives to deliver better outcomes	Barriers: investigation and report into barriers/obstacles (e.g. cultural) to the delivery of environmental and social benefits. Also develop Action Plan to remove barrier and improve good practice					
	Adaptation toolkit	Exploring options, financial and other, to help deliver long-term strategic policies (SMPs/CFMPs), including realignment. Includes consideration of social justice issues and how to facilitate delivery of environmental objectives					
	Broadening outcome definition and risk management tools and guidance	Development, consultation and publication of new types of policy statements and best practice guidance on flood and coastal erosion management including "User Friendly" versions					
		Develop, pilot and launch OPMs for EA and other OAs					
		Review research and the approach recommended to OAs on Climate Change					
	Building stakeholder and community engagement	Develop and review awareness and stakeholder activities community engagement models					
	Flood risk management innovation fund	Three year fund to attract bids for innovative flood risk management approaches that deliver sustainable benefits					
Land use planning	Conversion of PPG25 to PPS format, including consultation on draft. Take forward other proposed initiatives						

Theme	Project	2005	2006	2007	2008	2009	2010 onwards
Increasing resilience to flooding	Encouraging and incentivising increased resilience to flooding	Resilience: feasibility study on resilience grants, pilot and advice scheme					
		Other ways to encourage people to take up resilience measures in their homes including availability and quality of advice					
	Resilience standards for new buildings	Sustainable Buildings Code					
		Building regulations: research project, proposals and consultation					
	Increasing awareness and resilience to all forms of flooding including through improved flood warning	Feasibility study into expanding flood warning to cover other flood risks such as groundwater					
Home Information Packs							
Register of rapid response catchment areas							
Emergency planning response and resilience	Flood Emergency Planning Capabilities Programme and associated resilience work at local, regional and national level. Includes Lead Department Plan						
Funding	Other funding streams and evidence base for investment	Develop options for other funding streams					
		Achieving multiple objectives and maximising benefits by leveraging in other funding and contributions policy
